

Programming Fundamentals

Course Work 02

Introduction

This program is designed to generate the output for a [Railway Station information display](#). It takes user input for date, day, station details, and train arrival/departure times. The program will then display the formatted output with the provided information.

1. You should complete the code using the provided details as shown in the screenshots below.
2. Once you finished the coding part, run the program.
3. Follow the on-screen instructions to input the required information.

Instructions

1. Enter Input date as 2023-07-13

2. Enter details as below,

From : Galle

To : Colombo

Samudra Devi

Arrival Time : 4.50am

Departure Time : 5.00am

Sagarika

Arrival Time : 5.55am

Departure Time : 6.00am

Ruhunu Kumari

Arrival Time : 6.55am

Departure Time : 7.00am

Galu Kumari

Arrival Time : 7.20am

Departure Time : 7.25am

Rajarata Rajini

Arrival Time : 10.20am

Departure Time : 10.30am

Notes

This program uses the Scanner class to handle user input. Ensure that you have the necessary permissions to access the console or command line for input.

Ensure that you enter valid data in the correct format as specified by the program prompts.

Review and understand the program's logic to grasp how the output is generated based on the user's input.
